Data are based on base model with standard wheel. An upgrade of options and packages can lead to increased emissions and fuel consumption.

*Den angivna bränsleförbrukningen och utsläppsvärdena utgår från EU-förordning (EG) 715/2007 i den version som gällde vid tidpunkten för typgodkännande. Värdena avser ett typfordon med grundläggande konfiguration och det visade intervallet tar hänsyn till storleken på hjul, däck och extrautrustning.

* Värdena är enligt WLTP-körcykeln. Från och med 1 januari 2020 har WLTP helt ersatt den tidigare körcykeln NEDC. På grund av mer realistiska testförhållande - i WLTP är uppmätt bränsleförbrukning, energiförbrukning och koldioxidvärde ofta högre och verklig räckvidd i många fall lägre än med uppmätt NEDC-värde. Andra värden kan gälla vid beräkning av skatt och övriga fordonsavgifter. Du kan beräkna din fordonskatt på: www.bilsvar.se

Mer information om WLTP-körcykeln finns på www.bmw.se/wltp.

* Depending on the environmental conditions, a temporary peak of the combustion engine power is provided, which can be approx. 10% above the rated power. The duration of the peak performance increases with falling ambient temperature (approx. 5 s at +25 °C, approx. 40 s at -20 °C).
